**Senior Projects**
*Fall 2023*
<u>Project Schedules</u>

Every group must submit a project schedule. The project schedule must be presented first as a (simplified) Gantt chart, with rough dates listed across the top and horizontal bars representing anticipated activities. You should include activities that have already been completed, activities that have been started but not yet completed, and activities that have not yet been started. You do not need to include a vertical bar representing the current day, and you do not need to represent slippage of events that have already been started or completed. More information about the format of a Gantt chart will be discussed in person when this is assigned. You may use any software you wish to create the Gantt chart. The Gantt chart should cover your planned schedule *for the entire academic year*, not just the fall semester. After the Gantt chart, *briefly describe, in writing, each activity depicted in the Gantt chart*. We are only expecting a few sentences, or a paragraph at most, for each activity. As a rough estimate, I expect that a typical Gantt chart, covering both semesters of Senior Projects, will contain between 10 and 20 activities.

Project schedules are due by 2 pm on Tuesday, October 24. Each group should e-mail me an electronic version of their schedule before the start of class. Please list the names of all group members at the start of the document.
